

Quick Start Tips:

Open the Create Drawer
Select New and OK
Select Layout from Panels

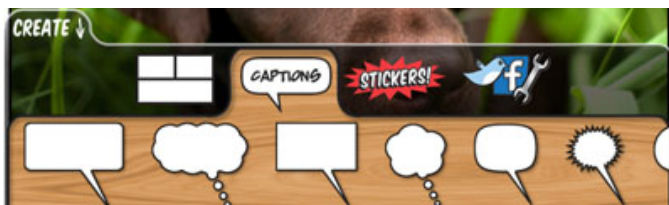

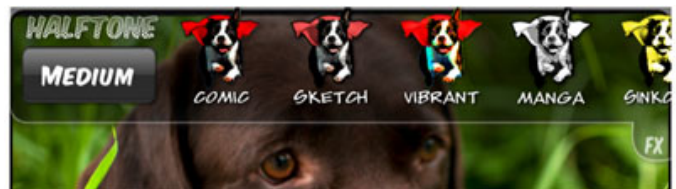

Choose from 16 portrait, and 14 landscape panel templates.

Tap the photo library icon to import images into panels, or on devices with a camera capture a new image by tapping the camera icon. You may rotate, scale and position the crop of the image by using two fingers to rotate, pinch, and move the image.

Add effects to each image by tapping the FX drop menu at the upper right corner of each panel. For a full authentic comic effect, turn on the Halftone switch first and choose either a small, medium or large halftone setting.

Open the Create drawer in the lower left corner of the ComicBook! to add captions (drag to move, tap to edit),

Save your finished ComicBook! image. You will find options to save and share under the Utilities menu (wrench icon).
